

## Row Crop Systems

Use Air-n-Till<sup>®</sup> Technology to Boost Your Yields and Manage Your Input Costs

- Vigorous inter-row root development improves yield
- AerWay<sup>®</sup> Shattertines<sup>®</sup> reduce run-off and improve water retention
- Enjoy better fertilizer placement and utilization
- Eliminate wheel track compaction with minimal surface disruption

*Advanced Aeration Systems*

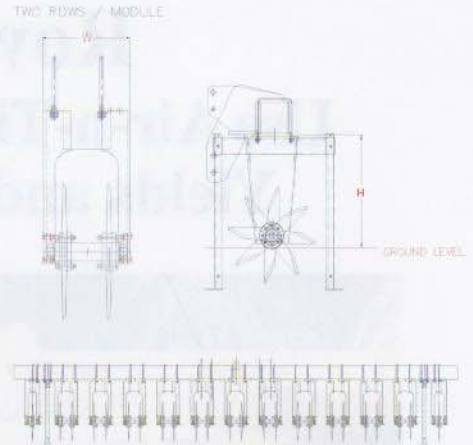

# Aerate All of Your Growing Crops for Increased Yield

AerWay® Row Crop Systems are available in a variety of spacings in either Tool Bar or Box Frame configurations.

Box Frame Systems use patented AerWay® Swing Arms to adjust tine angles that vary pocket size. The AerWay® Tool Bar System use a rigid 7" x 7" beam for mounting the Row Crop Modules.

AerWay® Row Crop Modules are available with 1, 2, 3, or 4 Rows of 8" Shattertines® with 5" to 7 1/2" spacings between the tines.

These Row Crop AerWays® are available in widths of 12 feet to 30 feet and can be tailored to meet your specific needs.

The Swartzmillers, Curt, Dan and Greg of Diamond S Farms in Attica, Ohio, credit their Row Crop AerWay® with boosting corn yields by 6-8 bushels. "We chose the Row Crop System to increase oxygen levels in our soils. We also found it to be an excellent way to side-dress nitrogen in high residue cropping." "We would definitely recommend an AerWay® to any row Crop farmer."

Curt and Greg Swartzmiller  
of Diamond S Farms
